**Comments / notes on tonight's mission and this interpretation:**

This was first night of IR for this fire that started 8-9 1830. The incident provided a perimeter 8-9 2200, 678 acres. The fire shows Intense Heat on the south, west and northwest sides. Northeast side of fire shows numerous small spots, probably from heats rolling down the steep ridge. Intense Heat is also found on the northeast side of the large spot fire. One potential spot fire is found north of Squaw creek and is labelled with latitude and longitude.
